

A MOLEESH

Senior Software Engineer & AI Generalist | Full Stack Development

+918903957007 @ moleesh1@gmail.com github.com/moleesh Bangalore / Hosur

SUMMARY

Senior Software Engineer and AI Generalist, 9.7 years across the full stack — frontend-deep (React, ExtJS) on Java/Spring Boot backends, with AI/ML tooling and CI/CD as part of one skillset rather than four separate specialties. Currently Module Lead owning frontend architecture on an enterprise transportation management platform, and building production AI agents that ground their output in real source code.

KEY ACHIEVEMENTS

Commercial Product in Production

Designed and shipped BabuScales solo for Babulens — running quarry weighbridge operations on Windows, with a tamper-evident audit trail.

Four Products Shipped Solo

Architected, built, and released four products end-to-end — web and desktop — from first commit to published release.

Leading a Frontend Modernization

Module Lead driving React 19/Redux onto an enterprise TMS still running ExtJS 4.2 portlets, through an Oracle-to-PostgreSQL migration.

Production AI Estimation Agent

Built KIMMY: SWAG estimates grounded in two live codebases, wired into four enterprise systems under least-privilege design.

Built Equifax's Deploy Pipeline

Automated the Jenkins deployment pipeline from scratch on a consumer-credit platform, recognized by the team for the time it saved.

Cross-Platform Release Automation

GitHub Actions pipelines that build and publish Windows and Linux artifacts to GitHub Releases on every tag.

EXPERIENCE

Apr 2021 - Present ·
5.4 years

Module Lead

Saksoft Limited (formerly DreamOrbit)

Project: Infios / MercuryGate (Transportation Management System)

- Lead frontend work on a Java 17/Spring/Maven TMS monolith (GridGain distributed compute, in-flight Oracle-to-PostgreSQL migration): shipping React 19/Redux pages — now migrating to TanStack Query and an internal Fabric design system — beside legacy ExtJS 4.2 portlets, and shaping API contracts with the backend team.
- Extended the Google Maps API to satisfy client-specific routing rules — a feature that drew strong client feedback.
- Untangled React/Redux flyout logic and selectors (Immutable.js), and wrote Jest suites covering Java services, debounce and race-condition logic, and React hooks.

Oct 2019 - Apr 2021 ·
1.5 years

Member Technical Staff

Zoho Corporation

Project: Zoho CRM (Customer Relationship Management), Zoho Corp, India

- Worked across nearly every core module of Zoho CRM, a large-scale CRM built on Java, HTML5, JavaScript, MySQL, PostgreSQL, and Handlebars.js.

Jan 2017 - Oct 2019 ·
2.8 years
Atlanta, US

Senior Software Engineer, CTO

Mindtree Limited

Project: Commercial MDS, Equifax Inc. (consumer credit reporting agency), Atlanta (US)

- Delivered across a large enterprise consumer-credit codebase (C++, Java, Spring, SOAP, MySQL, Greenplum), and built the Jenkins deployment pipeline from scratch — recognized by the team for the time it saved.

Project: Interaction Suite, Mindtree Limited

- Built Interaction Suite from the ground up (React, Node.js, MongoDB) as one of its core engineers, from design through deployment, including cloud-hosting proof-of-concepts on Azure and AWS (S3).

AI ENGINEERING

KIMMY — *Headless AI Estimation Agent (built for the Infios/MercuryGate team)*

- Built a headless, sandboxed agent engine that automates SWAG estimation and feasibility analysis, reading two production codebases so every estimate is grounded in real code: a React 19/Redux frontend (TanStack Query migration, internal Fabric design system) and its Java 17/Spring/Maven backend (GridGain distributed compute, EDI/SOAP carrier integrations).
- Wired the agent into four enterprise systems: team chat (OAuth2 + PKCE, headless token refresh, automated monitoring and replies), work-tracking (relation-graph traversal, writes scoped to comments and attachments only), source control (code grounding), and observability (log and incident querying).
- Designed every tool least-privilege, explicitly disabling higher-risk write and admin capabilities, and isolated the runtime in its own sandbox (separate config, skills, and integrations) with no dependence on the host machine's personal setup.
- LLM work also ships publicly on my GitHub: HireWise's candidate-ranking pipeline calls the Claude AI API directly for automated match scoring.

SKILLS

Languages

[Java](#) [JavaScript](#) [TypeScript](#) [Python](#) [C](#) [C++](#) [HTML](#)

Frameworks & Libraries

[Spring Boot](#) [Spring MVC](#) [Hibernate](#) [JPA](#) [React 19](#) [Next.js](#) [AngularJS](#) [ExtJS](#) [Handlebars.js](#) [NodeJS](#) [JSP](#)

EDUCATION

2016

Chennai, India

• **B.E Electronics and Communication Engineering**
St. Joseph's College of Engineering, Anna University

2012

Nagercoil, India

• **Higher Secondary School Certificate**
Ponjesly Public Mat. Hr. Sec. School

2010

Nagercoil, India

• **Matriculation School Leaving Certificate**
Ponjesly Public Mat. Hr. Sec. School

LANGUAGES

English
Advanced

Tamil
Advanced

INTERESTS

<> Coding

Building side products end-to-end, most nights and weekends.

✈ Travelling

Getting out to new places whenever the calendar allows.

🏆 Online Gaming

Creature-catching and ARPG titles in my downtime.

🤖 AI Automation

Wiring agents and tooling into the work I already do.

🎵 Listening to Music

Unwinding to music across a mix of genres.

PROJECTS

BabuScales — Weighbridge Platform (v1 → v3) [GitHub](#) | [Live Demo](#)

- Three generations of the same product, rebuilt as the problem grew. v1.0 (2019): a Java desktop weighing and godown system on H2/JDBC. v2.0 (2019): a full-stack Spring Boot + React rewrite reading live weight off the indicator over the serial port, with vehicle image capture, SMS alerts, an Arduino display board, and remote access over port forwarding with no hosted server.
- v3 — BabuScales (2026): the commercial release, shipped for Babulens and running quarry operations on Tauri v2/Rust, React 19/TypeScript and SQLite, built on the premise that weighing is an evidence problem, not data entry.
- Stability-gated multi-lorry weighing workflows, photographic capture on every weighment, and a hash-chained, tamper-evident audit trail with public QR ticket verification.
- Multi-printer output (dot matrix, A4/A5, thermal ESC/POS), native Excel/CSV export, offline-first Ed25519-signed licensing, and a bilingual English/Tamil UI shipping on Windows.

HireWise [GitHub](#) | [Live Demo](#)

- AI-powered recruiting platform (React 19, TypeScript, Vite, Tailwind CSS/SCSS, Supabase/PostgreSQL) covering the hiring pipeline end-to-end, from job posting through candidate ranking.
- Candidate ranking driven by the Claude AI API, plus Excel-ready reporting, an analytics dashboard, and role-based team administration — CI/CD deploys to GitHub Pages on every push to main.

FirstDay [GitHub](#) | [Live Demo](#)

- Employee onboarding platform (Next.js 16, React 19, TypeScript, SCSS modules, Zustand, TanStack Query) built as a Turborepo/pnpm monorepo with shared config, Zod schemas, and UI packages.
- Recruiters assemble reusable onboarding packs, map PDF fields, and track joiner progress; joiners upload documents, e-sign, and download completed packs — all behind Supabase auth with role-aware login flows.

VaultBill [GitHub](#) | [Live Demo](#)

- Offline-first billing and invoicing workspace for GST workflows, spanning a browser demo, and Electron desktop for Windows/Linux (React, TypeScript, TanStack Query, SQLite).
- Custom document and template designer with print-ready layouts and PDF export, filterable and sortable reporting, and role-based access control (SysAdmin/Admin/User/Demo).
- Automated release pipeline builds Windows and Linux artifacts on every push and tag, publishing straight to GitHub Releases.
